We need you to answer the questions and solve the problems of newbies in order for them to succeed.neq u_a$ and $v_a=v_b$ for all $a eq b$. Let X be the open subset of ${\mathrm{Gr}}(m,n)$ consisting of all strictly singular matrices in ${\mathrm{Gr}}(m,n)$. By [@LM2 Proposition 4.1], any two such matrices have a common nonzero column. Consider the flag $$V_1\subseteq V_2\subseteq \ldots\subseteq V_n\subseteq {\mathbb{C}}^m$$ with $V_i=V_i\cap X$. Then $\Pi_j(V_i)=0$ for all $j>i$, since $\overline{V_j}$ is strictly

singular and Π_j is a closed map. We conclude that $u_i \notin V_j$ for all i and all $j>i$. Let $W=X\cap U$, where U is the open subset of ${\mathrm{Gr}}(m,n)$ consisting of all matrices u satisfying $u_1,\ldots,u_m$ are linearly independent. A priori, W need not be an open subset of X. However, we claim that $W=X$. Let $u\in W$, and assume towards a contradiction that $u_m \neq 0$. Let $u_m=v$. Since u is in $W=X\cap U$, there is a nonzero $m\times m$ matrix v' such that $u_1,\ldots,u_{m-1},v'$ is a basis for ${\mathbb{C}}^m$. Note that v' has to be strictly singular since u is. Define $
