The title was intentionally vague to ensure that anyone sitting in the audience would benefit from it. My intention was to equip anyone with the basic skills to use Keynote to create a professional presentation that they can at ease use for their own work. Keynote works extremely well for presentations, whether that is for a company sale, an internal meeting to discuss the current business situation, or even to explain to your boss why the company deserves to bid for that contract. It doesn't really matter the material you are curating in Keynote. Whether it's a new product, why you are the best choice for the job, or a detailed report on the competitors, you can create it all in Keynote. Best of all, it is free! So, for anyone who is thinking of getting into Keynote, I would love to hear what you already know about creating a successful presentation in Keynote. Share this: Like this: I've been using Slack since its launch a couple of years ago and I have to say, they have done an amazing job in perfecting this integration into the web software landscape. New version 2.3 is just one of the many updates to this awesome collaborative tool we have all come to know, love and hate from Slack's many, huge updates in the past. Slack, the conversation collaboration platform - Cisco makes it easier to communicate, share information, and collaborate. We've all been on the same platform for a while now. At Cisco, we have been using Slack internally for almost two years. With the help of Slack, we can invite people to our meetings, interact using the channel and share knowledge in a more efficient way. What's new in version 2.3? The not-so-big changes to Slack 2.3, majorly focuses on addressing user difficulties in the new adoption process for corporate users with more robust capabilities in improving team directory searches, better use cases for file sharing and file sharing in public channels, volume metrics for private channels, and a number of improvements to the team directory search functionality. New user adoption The biggest change is the addition of a new user flow enabling you to seamlessly invite a user from your CRM database and have them join Slack as part of their social media integration. You can invite them to your channel and files become available on Slack. The other improvement we've got in this version addresses a user's event invitation process. This allows users to now create new channels with invite-only, rather than having to first create a new team from scratch. Benefits With the use of Slack, you can have a "second life" when it comes to the online collaborative interaction between your team members, your customers, and other users. Corporate adoption With new capabilities such as file sharing, channel sales, directory search improvements, and user authenticity verification. This ensures that your company is timely meeting compliance requirements and reduces the risk of any privacy issues. Great benefits for your company Slack is the perfect Team Collaboration software for businesses large and small, as it helps improve the effectiveness of your team functioning and productivity.

There is also another renowned app, GIMP that is the free and open source image editor for Windows, and Mac OS X. Although its design and functionality are very limited compared with Photoshop, GEDCOM format can be used with GIMP. The Adobe CS6 release adds a new feature in 3D Text layer. It is an interesting and useful feature as many people desire to put their own text or branding elements on their images, and 3D Text Layer does provide the tools for them to do that. Adobe Photoshop Lightroom is a photo manipulation and management software designed for professional photographers. It is used for organizing, editing, sharing, retouching, and printing photos. What's more, it is free whose price tag at \$600 is simply mind-boggling. The program stores your photos in a central online catalogue. You can download your desired pictures to your computer for further modifications, or you can edit them online using Lightroom. Adobe Photoshop, being the de facto professional photo-manipulation software, is always getting updated with new features. So, in the upcoming year, you will be updated with more powerful features and much more user-friendly tools. Keep your eyes open for some features with more details, and you will surely rock the competition and rock the world of image editing. In order to create better context, I would like to mention the below features in Photoshop, which I personally find useful:

1. The use of Camera Raw through which you can modify your workflow to the fullest.
2. Filter > Noise > Add Noise etc to add texture
3. Make image look like scanned, or adjust color temperature in your tonality. Using these will give you the perfect output.
4. Advanced shapes and text options

Another set of magic improvements in Photoshop is in the area of notepad - pen tool, which now includes a new smartbrush system that uses a variety of tools for quickly applying corrections, usually for quick fix or duplicate or repair work. And the Implement Mask feature is getting a whopping update, with a redesigned interface for easier masking. A new mask option enables you to mask with a pattern, and the Paint Bucket tool now includes 3D text effects. In short, Perk up your pen tool with these improvements. You'll also find other tweaks that make it easier to get the look you want better and faster, courtesy of a new intelligent edge-guiding tool that works in conjunction with Paths and a whole new set of features for creating custom mobile wallpapers and fantastic photo effects. And the channel feature on the Magic Wand tool is getting a major update with the introduction of the unique Navigator 7 Local Cut option, which helps you amazingly swiftly cut out an unwanted area from your screen or a photo, and then use that region as a selection for further work or to lock it in place. Other features include the new Color Fingerprint option, which is similar to the Color Variations option that's available on Behance, or any of your favorite print services. You'll also be able to customize access to Photoshop in more ways, such as setting up advanced settings, using shortcuts, and more. But that's not all: The newest update also provides a number of minor improvements and fixes, including color-management issues, which resulted in settings "disappearing" from Photoshop after being assigned to layers. Some users have also experienced crashes in Photoshop

when working on large files.
