With this in mind, let's start by talking about some of the new features in the latest version of Photoshop that we think are pretty cool. Lightroom 5 includes some great image processing tools:

- Organize in Collections. This tool allows to group similar photos in your computer and tags on them with a very simple and easy to understand interface.
- Grow a Select area within an image and quickly crop the selected area without cutting any of the other area.
- Spot healing tools that allow to auto-correct bad pixels and remove carpet stains, etc. This great new feature is right at hand.
- Editing tools are designed with a care for photo's quality. It is a feature that I think should be more useful in Lightroom than in other applications.
- The export to web feature is one of the most used feature among professionals, the rest of day, simply because it makes easy to print hi-quality images directly from Adobe apps. You can learn how to use this feature here:

Photoshop has been a fundamental art and business tool for graphic designers, photographers, and filmmakers for over 20 years. The program is used, in 2019, by more than 100 million people, and it's the most-used and the most-visited, in terms of number of pageviews, on <https://adobe.com/photoshop/>. It has been the best-selling Mac program since 1995, when Mac users started to switch from a PC-only system to a Mac, and it remains, still, the top-selling Mac program.

The Clouds filter allows you to create pixel-based miniature clouds from any area or portion of your image. For example, you could take the top half of a building in an image and manipulate it using the Clouds filter to create a giant-sized cloud. Or, you might take a portion of the sky in an image and remove it, with the blur effect, to create a miniature painting of a cloud. **What It Does:** A Spot Healing brush makes quick work of spot defects, like blemishes from freckles, getting rid of speckles on digital images, or making a small number of tiny changes to individual pixels. This tool, combined with other tools, can help you get rid of embedded dust or dark areas without permanently altering the rest of the image. And since the Spot Healing brush is so closely associated with the Brush tool, you'll be learning a lot about how the tools work together. **What It Does:** The Lens Correction feature lets you remove chromatic aberrations from images that have been captured with a camera using a traditional lens. Chromatic aberrations occur as the lens focuses on an object, causing color to change slightly as the image is focused at different distances. The Curves module, previously known as the Levels module, is a great way to remove most of these effects, and the Levels tool with the Lens Correction enabled is a good way to start. The Rubber Stamp tool allows you to quickly create copy and paste effects that you can later combine, by inching, dragging, and pasting them together, using the Move tool. Once you've created a custom image on a layer, you can reuse it by clicking the Edit | Copy layer location, or you can copy it and move it to another image if you need to. You can also use the Edit | Paste layer(s) to paste one or more layers from another image or document. e3d0a04c9c
