I think that photo editors should be customizable. I know the advantages that come from having a suite dedicated to one application, and it's not always the photo editing aspect. The best and worst part of the upgrade is the way that Lightroom handles my JPEGs. I'm rather stingy about how many such files I keep in my collection. With the previous version I imported about 500 images, and each year the number would have gone up. This year it rose to a whopping 1,645.00. Now comes the bad news. Let me say this is no slight, but I'm sorry to report that the content of Lightroom is not there. This is a new minor upgrade and I'm sure the team of engineers working in there put in quite a bit. As I said above, I found their product to be impressive enough, but especially to be a top feature set up against Photoshop. It looks like there could be some very new and exciting features in the next version of Lightroom coming out around March when they release it for Mac in particular. Until then, I wish you all the best with the new and improved features. Thanks for reading! Keywords: PDF, PDFXML, LaTeX, PS. I could go on and on about all the improvements that were made to the magazines editing environment in Photoshop this year, but I'll just say that it's full of great looking improvements that make it into the workflow of most design agencies. But if you're not working in a design agency and you use Photoshop for your print creations, I think those improvements are similarly applicable. While it sounds great to be able to convert images to grayscale, you might find the results a little disappointing. For starters a lot of the elements in the picture will need to be taken down or even dropped out. This is particularly true of kids' pictures, and I doubt anyone is going to lose sleep over this. From what I've seen, the stand-out enhancement from the relatively modest amount of functionality offered in the X version should not be overlooked either.
